

JDBC Conn.java File

This document contains the JDBC Conn.java file used to connect a Java application with a MySQL database.

```
import java.sql.Connection;
import java.sql.DriverManager;

public class Conn {
    Connection c;

    public Conn() {
        try {
            // Load MySQL JDBC Driver
            Class.forName("com.mysql.cj.jdbc.Driver");

            // Create Connection
            c = DriverManager.getConnection(
                "jdbc:mysql://localhost:3306/your_database_name",
                "root",
                "your_password"
            );

            System.out.println("Database Connected Successfully!");
        } catch (Exception e) {
            System.out.println(e);
        }
    }
}
```

Example Usage:

```
Conn conn = new Conn();

PreparedStatement ps = conn.c.prepareStatement(
    "INSERT INTO exam VALUES (?, ?)"
);
```
